

Nguyen Hoang Linh

Software Engineer

I am a backend developer with over 4 years of experience in software development. I have experience in developing enterprise web applications in networking and banking domains. My technical expertise includes Java, Spring framework, relational database. I am committed to develop system with strong focus on maintainable, scalability and performance. I am always eager to learn new technologies then apply them to my working project to enhance productivity and performance. My goal to join a team with active and competitive environment to improve my technical and collaborative skills.

Education

Can Tho University 2018 - 2022
Major: Information Technology
Degree: Very good

Technical Stacks

Programming Languages
Java, Rust, Javascript, C, C++

Technologies
SpringBoot, Hibernate, MariaDB, Linux, ShellScript, HTML, CSS, JQuery

Networking
Common protocols: TCP/UDP, Socket programming, HTTP/HTTPS, SSH, FTP, SNMP

Additional Skills
AWS, database design, writing technical documentation

English
Able to use English in conversation, good at listening

Work Experience

YMC at SAI Digital (10 members)

02/2026 - current(full-time)

Integrated SAP Customer Data Cloud to manage customer identity and consent data in compliance with privacy regulations and parental consent requirements.

Technologies

- Java, Spring Boot, SAP Customer Data Cloud, AWS (Lambda, DynamoDB, S3, SQS, API Gateway, ...), OIDC OAuth, Cucumber tests, HTML, CSS, JavaScript

Main Responsibilities

- Implemented new features based on customer requirements
- Supported AMS activities by resolving production incidents and responding to customer inquiries
- Collaborated with Solution Architects to define technical solutions
- Worked closely with international team members, including Solution Architects, Business Analysts, and QA
- Performed code reviews
- Documented technical designs and deployment procedures

KBTG at FPT Software (21 members)

07/2024 - 01/2026(full-time)

Join a team focusing on implementing SWIFT ISO 20022 standards for both inward and outward remittance transactions.

Technologies

- Java, Spring Boot, Spring MVC, JPA, Hibernate, Microservices, Kafka, Redis, MariaDB

Main Responsibilities

- Join a team focusing on implementing new feature from customer requirements
- Fix software defects and incidents on production environment
- Collaborate with foreign teams (Dev and QA)
- Perform batch data processing for importing and exporting data
- Perform code review and create plan to train new team members
- Documented technical designs and deployment procedures for internal knowledge sharing

Project AMS at TMA Solutions (15 members)

07/2023 - 7/2024(full-time)

Manages software packages of appliances, providing a Web UI for configuration and deployment. It monitors services and hardware health in real-time, notifying users of issues for quick resolution.

Technologies

- Java, Spring MVC, Hibernate, MariaDB, SSH, DNS/DHCP, WireShark, Rocky Linux, ShellScript

Main Responsibilities

- Develop crucial features based on the customer requirements
- Collaborate with foreign teams from Poland.
- Fix the software's defects and enhance system performance
- Design database and write SQL based on detailed design.
- Demo features and training new team members
- Write tools to support development more productively.

Project VitalSuite at TMA Solutions (18 members)

05/2022 - 07-2023(full-time)

Monitors network performance from network devices, generate inutitive reports and dashboards, proactively identifying issues. Generates real-time alerts for network administrators to minimize impact.

Technologies

- Java, C++, Spring MVC, MariaDB, Windows Server, Redhat Linux, ShellScript

Main Responsibilities

- Develop and fix the application's defect base on requirements.
- Investigate and upgrade third-party libraries
- Nightly support customer when they have issues
- Optimize query performance
- Collaborate with foreign customer from America
- Write software documents for defect and user manual

Project Patch Management Tool at TMA Solutions (12 members)

02/2023 - 08-2023(part-time)

A tool to manges patching versions of software packages, to help automate the process of patching software.

Technologies

- Java, Spring Boot, JPA, PostgresQL, Spring Cloud, Kafka, Redis

Main Responsibilities

- Develop API Gateway: Routing, Catching, Authentication and Authorization
- Develop a REST API Patch Service using Spring Boot, PostgresQL
- Develop a Logging feature
- Write Readme and User Guide document

- Review others team members's code
